

Solution Architecture

Date: 29 September 2026

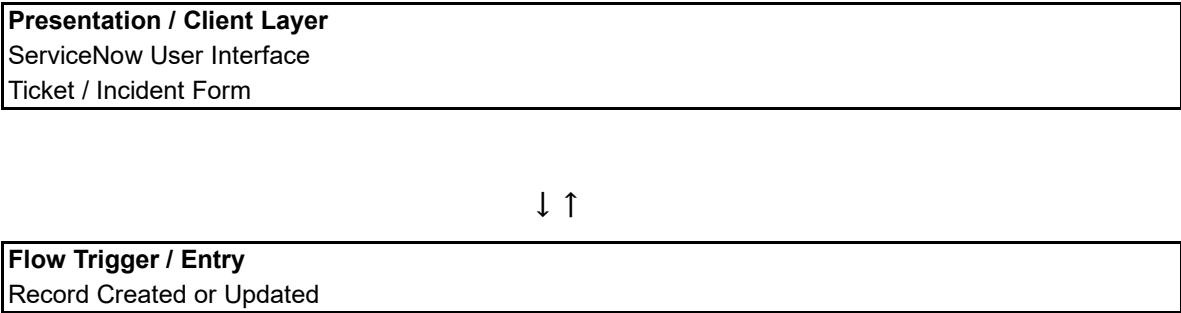

Team ID: SWTID-2026-1551

Project Name: Auto Ticket Classification using Flow Designer

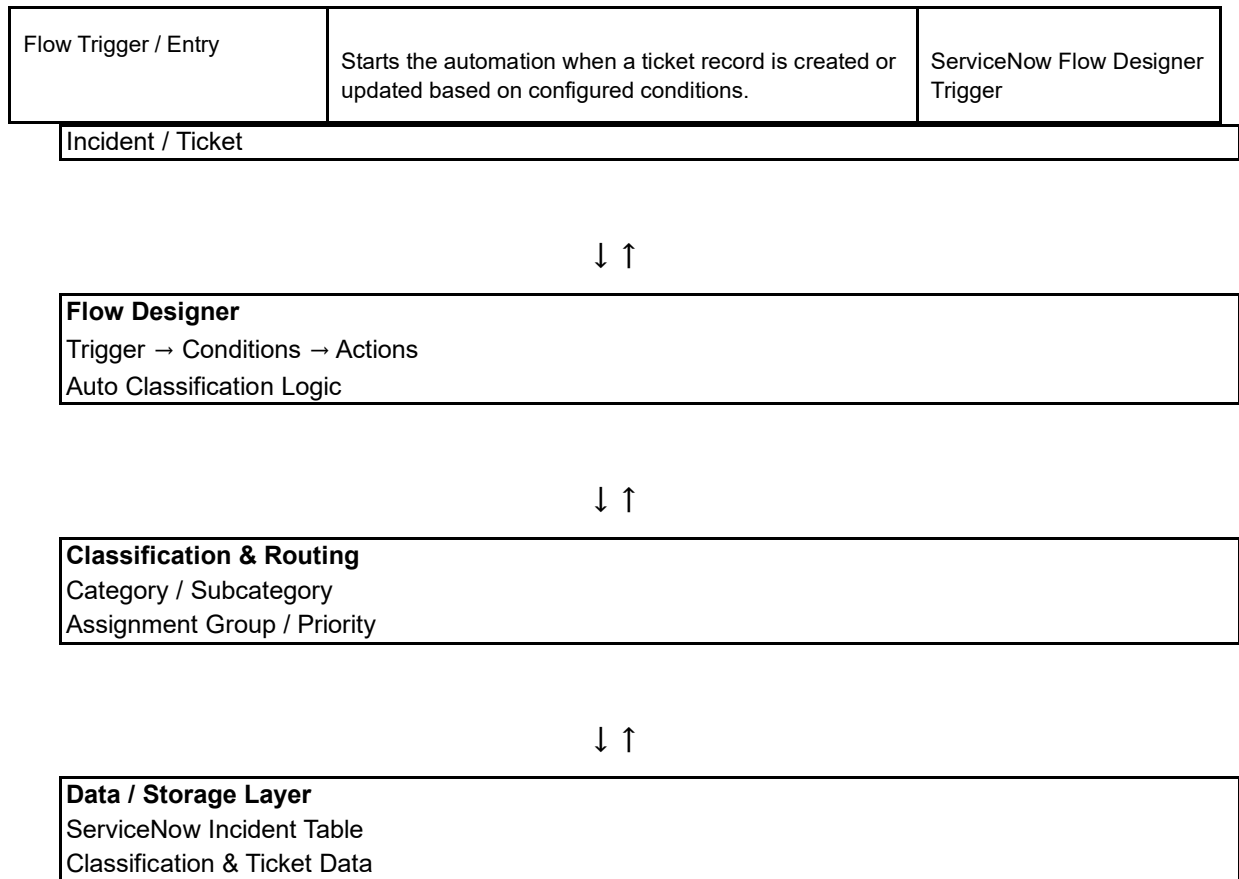

Maximum Marks: 5 Marks

Solution Architecture Diagram

A high-level architecture for automatically classifying incoming service tickets using ServiceNow Flow Designer. The flow receives a ticket, evaluates its details, determines the appropriate classification, and updates/routes the ticket accordingly.

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the interface for users to create, view and update service tickets.	ServiceNow UI / Incident Form

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Flow Designer	Controls the workflow using conditions and actions to classify tickets automatically.	ServiceNow Flow Designer
Classification & Routing	Sets ticket category, subcategory, priority and/or assignment group according to classification rules.	Flow Designer Conditions & Actions
Database	Stores ticket details and the resulting classification and routing information.	ServiceNow Incident / Ticket Table

Overall Flow: User creates/updates ticket → Flow Designer trigger starts → ticket information is evaluated → classification rules are applied → category and routing fields are updated → classified ticket is stored in ServiceNow.
