Project Title Auto Ticket Classification Using Flow Designer

Project Proposal (Proposed Solution) report

The proposal report aims to automate IT ticket classification using ServiceNow Flow Designer, improving the speed, consistency, and accuracy of ticket handling. The solution reduces manual classification effort and helps route tickets to the appropriate category, assignment group, and workflow.

Project Overview

Objective The primary objective is to implement an automated ticket classification process using Flow Designer, enabling incoming tickets to be analyzed and automatically classified and routed based on defined conditions.

Scope The project covers the design and implementation of automated flows for classifying tickets, assigning appropriate categories and assignment groups, and triggering subsequent actions with minimal manual intervention.

Problem Statement

Description Manual ticket classification can cause delays, inconsistent categorization, incorrect assignment, and additional workload for support teams. These issues can affect ticket resolution time and overall service efficiency.

Impact Automating ticket classification can reduce manual effort, improve routing consistency, speed up ticket processing, and support better operational efficiency and user satisfaction.

Proposed Solution

Approach Use ServiceNow Flow Designer to create an automated flow that evaluates ticket information such as short description, category, priority, and other defined conditions. Based on the configured logic, the flow updates classification fields and routes the ticket to the relevant assignment group.

Key Features

- Automated classification of incoming tickets.
- Condition-based routing using Flow Designer.
- Automatic assignment to appropriate support groups.
- Reduced manual intervention and classification errors.
- Consistent processing of tickets through reusable flow logic.

Resource Requirements

Resource Type	Description	Specification / Allocation
Platform	Service management platform	ServiceNow
Automation Tool	Workflow and automation	Flow Designer
Data	Ticket/incident information	Incident records
Configuration	Conditions, actions and routing rules	Configured in Flow Designer
Testing	Functional and flow validation	ServiceNow test records

Expected Outcome

The completed solution will automatically classify and route tickets using Flow Designer, reducing repetitive manual work and providing a structured, consistent ticket-handling process.
