Define the Problem Statements

Date	29 September 2026
Team ID	SWTID-2026-1551
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand the customer's point of view. The Customer Problem Statement template helps focus on what matters when creating an automated ticket-classification experience.

A well-articulated customer problem statement allows the team to identify the challenges customers and support teams face, understand the impact of incorrect or manual ticket classification, and define a suitable automation solution using Flow Designer.

Problem Statements

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am a Service Desk agent.	I'm trying to classify incoming support tickets correctly and quickly.	But tickets may be assigned the wrong category or assignment group when classification is done manually.	Because the process depends on repetitive manual decisions and consistent classification rules are not always applied.	Which makes me feel that ticket handling is slow and error-prone.
PS-2	I am a user requesting IT support.	I'm trying to get my ticket routed to the correct team as quickly as possible.	But my ticket may be delayed when its category or assignment group is incorrect.	Because ticket classification is not automatically performed using predefined conditions.	Which makes me feel that my support request may take longer to resolve.

Project Focus

The proposed project focuses on automatically classifying service tickets using Flow Designer. Based on ticket information and predefined conditions, the flow can identify the appropriate classification and routing information, reducing manual effort and improving consistency.
