

Customer Journey Map

Project Name: Auto Ticket Classification Using Flow Designer

<i>Phase of Journey</i>	<i>Stage 1 – Ticket Creation</i>	<i>Stage 2 – Automatic Classification</i>	<i>Stage 3 – Assignment & Resolution</i>
Actions	• User reports an issue • Enters short description and details • Submits the ticket	• Flow Designer detects the new ticket • Reads ticket information • Identifies category/subcategory • Applies classification automatically	• Ticket is routed to the appropriate team • Support team reviews and works on it • Ticket is updated and resolved
Touchpoint	• ServiceNow Incident/Ticket form • Short description • Category and ticket details	• Flow Designer • Flow trigger • Classification logic • Ticket fields	• Assignment group • Assigned agent • Incident work notes • Resolution fields
Customer Thought	• “I need to report my problem.” • “I hope the ticket is submitted correctly.”	• “Will the system understand my issue?” • “I should not have to select everything manually.”	• “My issue should reach the right team.” • “I want a quick resolution.”
Customer Feeling	• Concerned • Hopeful	• Curious • Relieved when classification is correct	• Confident when assigned correctly • Satisfied after resolution
Process Ownership	• End User / Service Desk • Ticketing System	• Flow Designer / Automation • ServiceNow Administrator	• Assignment Group • Support Agent • Service Desk
Opportunities	• Keep ticket form simple • Provide clear descriptions and required fields • Reduce unnecessary manual entry	• Improve classification rules • Use accurate category/subcategory mapping • Add validation and exception handling • Reduce manual classification effort	• Auto-assign based on classification • Notify the correct support team • Track SLA and status • Capture resolution details for future improvement

Purpose: To show how Auto Ticket Classification using Flow Designer improves the ticket journey by reducing manual classification, routing tickets to the appropriate support team, and supporting faster resolution.
